Samuel OLAGOROYE

FULLSTACK DEVELOPER

Email: olagoroyesamuelakolawole@gmail.com | **LinkedIn:** linkedin.com/in/samuel-olagoroye-bamicole | **Github:** https://github.com/SAM-BAMKOLE | **Phone:** +234 913 411 5254

Results-driven Full-Stack Developer at PHOS Consults with over **3 years** of experience building and delivering web applications for clients. Skilled across the full development lifecycle, including frontend and backend development, API design, database architecture, testing, and deployment. Proficient in React, Next.js, WordPress, Supabase, Docker, PostgreSQL, and AWS. Demonstrated impact through a **130%+** increase in registration conversion, **71%** reduction in page-load time, and **58%** improvement in median API response time on a platform serving **15,000+ users**. Focused on building scalable, maintainable solutions that solve technical challenges and deliver measurable business value.

SKILLS/HIGHLIGHTS OF EXPERTISE

Category	Skills
Frontend Development	TypeScript, JavaScript (ES6+), React, Next.js, Vue.js, Responsive Web Design, Zustand, React Context API, React Query, Redux Toolkit, Frontend Performance Optimization
Backend Development	Node.js, NestJS, Express, REST APIs, GraphQL (Apollo), WebSockets (Socket.IO), OpenAPI/Swagger
Databases & Data Management	PostgreSQL, MySQL, MariaDB, MongoDB, SQL, Database Design, Supabase, Neon, Appwrite, Redis | Prisma, TypeORM, Mongoose
Testing & Software Quality	Vitest, Jest, Playwright, Supertest, React Testing Library, Cypress, Unit Testing, Integration Testing, End-to-End Testing, Debugging, Code Review
DevOps, Cloud & Deployment	Docker, GitHub Actions, CI/CD, AWS (EC2, S3, RDS, CloudWatch), Nginx, Google Cloud Platform (GCP), Vercel, Netlify, cPanel
CMS & Third-Party Integrations	WordPress, Contentful, Sanity, Paystack, Flutterwave, Termii (SMS), Transactional email APIs
Development Tools & AI Workflows	Git, GitHub, OpenCode, Claude, Codex, AI-Agentic Development, Figma, Jira, Trello, ClickUp, Postman
Security	JWT and refresh tokens, role-based access control (RBAC), Google OAuth 2.0, input validation, rate limiting, OWASP Top 10
Practices	Agile/Scrum, code review, system design, technical documentation

KEY PROJECT HIGHLIGHTS

1. **Development of Website and E-Commerce Solutions, and Admin Dashboards**

   Developed 10+ websites and e-commerce platforms across consulting, e-commerce, and professional services. Examples include;(https://capitalconsulthq.com), https://advanceconsulting.uk, https://henrypricilla.com, https://terlynconsulting.com, http://pearlawards.africa, https://nextjs-full-storefront.vercel.app). Improved page-load performance by 71%, increased enquiry conversion by up to 35%, and reduced mobile bounce rate by 22% while increasing mobile engagement by 28%. Led a team of four developers to deliver an e-commerce platform within three months, including product catalogue and WhatsApp ordering integration.

2. **SaaS & Mobile/Desktop App development**

   Developed a multi-tenant Logistics & Delivery Management System (Web & API - https://github.com/SAM-BAMKOLE/routiq-logistics-and-delivery) and Project Management SaaS platform (API - https://github.com/SAM-BAMKOLE/atlas-team-management-api, WEB - https://github.com/SAM-BAMKOLE/atlas-team-management-web), alongside Quicklink and Securely Share Secrets. Implemented production-focused backend architectures using NestJS, TypeScript and PostgreSQL, with Redis caching, OAuth2 integration, JWT authentication, role-based access control, and PostgreSQL Row-Level Security for tenant isolation. Built asynchronous processing with event-driven architecture,

transactional outbox patterns, and automated email integrations. Optimized database queries, external API calls and request handling through caching, indexing and rate limiting. Achieved 41% faster API response times, 66% reduction in redundant database queries, 99.5% service availability, and sub-200ms average response times across optimized endpoints.

CAREER EXPERIENCE

PHOS CONSULTS LTD (Technology & Digital Transformation Services) – Nigeria & UK
Fullstack Developer (2023 – Present)

Overview: Currently at PHOS Consults, I work as a Full-Stack Developer building and maintaining web applications for external clients. My work spans frontend and backend development, API and CMS integrations, database management, testing, performance optimization, and deployment.

Roles & Responsibilities:

- Owning full-stack delivery for client projects across discovery, implementation, testing, and release, translating product requirements and Figma designs into maintainable application features.
- Designing and maintaining REST APIs with NestJS/Express and TypeScript, including DTO/request validation, centralized exception handling, role-based authorization, and API documentation.
- Building responsive frontend workflows with React, Next.js and ShadcnUI; extracted reusable components and handled loading, empty, validation and error states for data-heavy screens.
- Modelling relational data in PostgreSQL using normalized schemas, migrations, indexes and transaction-safe operations for workflows involving users, orders, invoices and audit records.
- Integrating external services including payment-provider sandbox flows, email delivery and file storage; implemented webhook signature checks, idempotency safeguards and failure-state handling where applicable.
- Improving release confidence by adding unit and API integration tests, participating in pull-request reviews, and introducing GitHub Actions checks for linting, type checking and test execution.
- Supporting deployments and production support using Docker-based environments and AWS/managed hosting services; investigated logs, reproduced defects and documented fixes with regression coverage.
- Build responsive, accessible, and reusable frontend interfaces, translating designs and requirements into functional user experiences.

Key Achievements:

- Improved front-end performance with code-splitting, memorization, and list virtualization, lifting the Lighthouse performance score from 54 to 91 and reducing load time from 4.2s to 1.6s.
- Delivered 10+ client websites and web platforms within four months, managing multiple projects concurrently across consulting, e-commerce, and professional services while maintaining separate requirements, codebases, and delivery timelines.
- Containerized 6 services with Docker and built GitHub Actions CI/CD pipelines (lint, test, build, deploy to AWS EC2 behind Nginx), reducing deployment time from 40 minutes to 7 minutes with zero-downtime releases.
- Integrated Paystack and Flutterwave for loan repayments with signed webhook verification and idempotency keys, holding the duplicate/failed transaction rate under 0.4% on ₦35M+ in processed volume.
- Added Redis caching and BullMQ background jobs for statement generation and SMS/email notifications, reducing p95 API latency from 1.9s to 480ms and eliminating report timeouts.
- Raised test coverage from 22% to 78% with Jest unit and integration tests plus Cypress end-to-end flows, reducing post-release defects by 45% over three quarters.
- Redesigned EvridayMoni's registration experience, increasing registration conversion from 32% to 55% and first-time-user completion from 30% to 68%.

EDUCATION & CERTIFICATIONS

- **B.Sc. Computer Science,** Federal University Oye-Ekiti, Nigeria – 2026
- Legacy JavaScript Algorithms and Data Structures V7 (FreeCodeCamp)
- Get Started with Cloud Native, DevOps, Agile, and NoSQL (IBM)
